

Purposeful Design Science

Purposeful Design is the Christian publisher of our new elementary science curriculum. At Gilbert Christian Schools, students receive science instruction beginning in kindergarten in a hands-on, highly interactive science lab format. In fact, during the elementary years, students attend “science lab” as one of their weekly specials! Our curriculum engages students in investigating, observing, and thinking about the created world. It weaves the wonders of creation and a biblical worldview into weekly science instruction. Our science program has a continual theme that runs throughout the curriculum: God’s design throughout His creation. To learn more about elementary and 6th grade science go to:
